

Network Mapping and Analysis

This exercise helps develop an understanding of existing networks and the ability to plan, develop and catalyze the network, in the context of a goal.

NETWORK MAPPING

- Map the current network and the desired network in context of the goal
- Identify all entities in a network, the overall structure of the network and the interactions between the entities

- Assess the overall network and the interactions between actors
- Derive insights for different contexts depending on the objective

NETWORK ANALYSIS
